

Kabilan M

+91 7604959955 | mkabilan1409@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Trichy, Tamil Nadu, India.

OBJECTIVE

Transitioned from Mechanical Engineering to Information Technology with a passion for software development and emerging technologies. Through academic excellence, full-stack internship experience, AI-based applications, and network security projects, I aim to build innovative solutions while contributing to organizational success.

EDUCATION

Kongunadu College of Engineering and Technology (2024 – 2027)

B. Tech Information Technology | CGPA: 7.08 up to 6th sem
Thottiyam, Trichy.

Kongunadu Polytechnic College (2022 – 2024)

Diploma in Mechanical Engineering | 92%
Thottiyam, Trichy.

Government Higher Secondary School (2021 – 2022)

Higher Secondary Certificate (HSC) | 50%
Pappapatti, Trichy.

SKILLS

Technical Skills:

Programming Languages: Java.

Web Technologies: HTML, CSS.

Database: MySQL, MongoDB.

Big Data Technologies: HDFS, Pig.

Operating Systems: Windows, Linux (Ubuntu, Kali Linux).

Tools: Git, GitHub, Wireshark.

Core Concepts: DBMS, Computer Networks.

Soft Skills:

Problem Solving, Teamwork, Communication, Critical Thinking.

PROJECTS

Wi-Fi De-authentication Device (Educational Purpose Project):

ESP8266, Arduino IDE, C++, Wi-Fi Packet Monitoring, OLED Display, Push Buttons.

- Developed an ESP8266-based wireless network monitoring device capable of analyzing Beacon, Deauthentication, and Probe frames in real time.
- Implemented packet sniffing and frame analysis to identify suspicious wireless network activities and detect potential deauthentication attacks.
- Integrated an OLED display to provide live network status, attack notifications, and security monitoring for educational and research purposes.

De-authentication Detection System in Open Networks:

ESP32, Arduino IDE, C++, Wi-Fi Packet Sniffing, OLED Display.

- Built an embedded wireless security monitoring system using ESP32 to detect deauthentication attacks.
- Implemented real-time packet capture and analysis for IEEE 802.11 management frames.
- Generated live alerts and displayed attack information on an OLED display to improve network monitoring and security awareness.

Forest Fire Prediction System:

Platform - React, Node.js, Python, REST APIs.

- Developed an AI-based forest fire prediction system using environmental and historical data.
- Implemented real-time heatmap visualization for risk monitoring.
- Integrated Email and WhatsApp alerts with Google Maps for rapid response.

INTERNSHIP

Full Stack Developer Trainee | e-soft IT Solutions | June 2025

- Developed responsive web applications using HTML, CSS, JavaScript, and Java.
- Connected frontend applications with MySQL databases for efficient data handling.
- Implemented CRUD operations and validated user input. Assisted in testing, debugging, and maintaining web applications.
- Collaborated with developers to deliver reliable and user-friendly software solutions.

CERTIFICATIONS

- Infosys Springboard – Front End Developer Certification
- Fundamentals of Cyber Security Certification
- AI & DS Hackathon – 1st Prize
- IT Project Expo – 2nd Prize

ACHIEVEMENTS

- 1st Place – Artivers 3.0 Hackathon (College Level)
- 2nd Place – Tezario 3.0 Project Expo(College Level)

EXTRA-CURRICULAR & LEARNING

- Practiced problem-solving and labs on Try Hack Me and similar platforms.
- Participated in technical competitions and coding activities.
- Continuous learning in IT domains including development and networking.

AREAS OF INTEREST

Software Development | Full Stack Development | Java Development | Web Development | Database Management | Networking | Cloud Computing .
